

FCC Members,

I am writing to protest this plan to do away with "Net Neutrality".

The Internet was developed to encourage free and open conversations between parties. There are now just a few companies who control access to the web, but millions of companies, individuals and non-profit groups that rely on this open access. It should be treated like a public utility and not allow just a couple of companies to control this worldwide access in a way that only benefits them. Not only that, but will effectively allow them to censor the Internet.

This is clearly a money & power grab that is NOT in the interests of the American public. Please show some backbone and some concern for the American people and do not allow this to happen.
